

ENERGY BRIGHT
BERKS HOMES CERTIFIED

In today's world, it is important to be mindful of the energy that is consumed by our homes. The systems and products that are built into our homes – heating, air conditioning, appliances – all have an impact on our environment and our wallets. At Berks Homes, we make it our priority to design and build with energy efficient cost saving methods. Energy efficiency shouldn't be an option or an extra...it should be an expectation.

Our premier Energy Bright package comes standard in every home that we build.

Energy Bright Premier Insulation

Insulation is an essential building material because it creates a barrier, or an envelope, around all living spaces which is important when maintaining an even temperature throughout the house. This barrier reduces energy usage and increases comfort. We base the amount of insulation that should be installed on the design of the home and the climate in which the home is located.

Energy Bright Premier Windows

We proudly install Simonton double-glazed pre-finished vinyl windows with low "E" glass in all of our homes. Simonton windows are known for optimum construction tightness which prevents air leaks and increases energy efficiency.

Energy Bright Premier Heating and Cooling Systems

Our air supply system includes sealed central air return ductwork ensuring minimal leakage for superior duct tightness. This tight ductwork improves comfort and indoor air quality while reducing utility and maintenance costs.

Energy Bright Premier Products

To complete Berks Homes Energy Bright package we strategically select quality, energy-saving products that are meant to cut down on utility costs. Premier products are selected such as Energy-Star Whirlpool kitchen appliances, classic energy saving light fixtures, durable and versatile flooring materials, an energy efficient water heater, and a state-of-the-art Manabloc Plumbing System, among many others.
