This 1900 sqft home really packs a punch. A really roomy, impressive punch. Let's start with the kitchen. It's got quartz countertops, white cabinets, and a gorgeous island where everyone will congregate before and after meals. Trust us. Don't worry though, we designed a spacious breakfast nook so everyone can sit down and be together. There's also a family room, flex room, powder room, and an elegant foyer all on the first floor. We have to mention the deck leading to the back yard. It provides the perfect outdoor living space. The second floor has all 4 bedrooms and 2 bathrooms. And not one, but two walk-in closets. The owner's suite has an option upgrade in the bathroom and the other bedrooms have plenty of space for you. Skipping down to the basement, you can leave it unfinished and use it as storage or finish it for even more living area. 600 more sqft to be exact. Speaking of storage and more space, you'll also get a 2-car garage with this home.
